

Technology Board Update

October 13, 2020

Steven Gingerich

- Receiving quotes to migrate from current PBX to IP phone system.
 - Multiple factors contribute to the need to investigate alternatives:
 - Current phone manufacturer purchased by a separate company and discontinued. This removes the option to increase licensing if needed in the future, as well as increasing the scarcity of replacement equipment.
 - Network interface utilized is notoriously rigid and obscure.
 - Tech support is becoming increasingly difficult to obtain.
- Successfully launched and supported initial NWEA Testing in Elementary and Middle schools.
- Began software distribution and installation to prepare for ILearn testing, practices, etc.
- Began migration of repair Depots from AGI Repair to SecuredTech Solutions.
 - In addition to being largely more cost-effective, SecuredTech is based out of Noblesville, rather than Greensburg, PA; decreasing turnaround time for repairs.
- Meeting with E-Rate consultant to help scope future projects.
