

## **Student Achievement and Learning Report**

### **Math Resource Adoption Committees**

TCSC is undertaking a math resource adoption at all three buildings. A committee from each school was formed to develop a rubric based on the academic needs of students, teachers, and families. This rubric was used to evaluate a variety of math resources at the math caravans hosted by the Education Service Centers across the state. We are currently in the evaluation process with the expectation to bring a recommendation to the school board at one of the next two board meetings. Below is a snapshot of where each building is currently at in the process.

#### **TES**

- The elementary team met this past week to review the six resources that were presented at the math caravans. After some great discussion, the team narrowed our focus to one resource (Savvas' EnVision). We have scheduled a more comprehensive presentation of resources with Savvas that will be shared with the elementary teachers for further questions and scrutiny.

#### **TMS**

- The middle school will be meeting later this week to follow the same process as the elementary school. Health and safety impacted the number of team members able to attend the math caravans, so more time may be needed as we may bring multiple vendors in for presentations.

#### **THS**

- The high school is postponing their next meeting for later this month. Vendors at the math caravans did not come prepared with the latest update in their resource. Team members are currently waiting for updated copies of these resources to be sent and will need time to review prior to our next meeting.

### **MTSS Leadership Team**

In order to ensure all students are achieving success at TCSC, a multi-tiered system of support needs to be established to serve as a safety net for students at risk. The district's MTSS Leadership Team, consisting of school and district leaders, has met twice this past month to establish a vision and clear expectations for the team and begin building some common understanding of MTSS and personalizing that system to our needs and resources here at Tipton. With the support of the IEPRC, the team will focus on how to ensure students at all levels have the necessary support to achieve more through a systematic approach to intervention.

### **February 22nd E-Learning Day**

Our next E-Learning Day will focus on our district's year-long effort to establish a coherent, guaranteed, and viable curriculum for all courses across TCSC. The majority of our time will be spent providing teachers the opportunity to collaborate with colleagues across buildings and grade levels to create a coherent curriculum free from gaps or unnecessary redundancies. The result of this time should provide more clarity and increased communication between teachers

and buildings with regards to what students need to know coming into a class, what they will learn in that class, and what they need to be successful at the next level. I will have more information regarding the the effectiveness of this time at the next board meeting.
