

Technology Board Update

April 12, 2022

Steven Gingerich

- 2022-23 9th Grade MacBook order delivered. Devices will be configured over summer in preparation for next school year.
 - MaxCases shells ordered and shipped.
 - Laptop bags ordered, scheduled for delivery during summer as we typically order these far ahead of time.
- Coordinating with Apple regarding shipment of 2022-23 iPads.
 - Delivery should be complete during the course of the next month. Continued component shortages have caused delays in manufacturing, etc.
- Conducting initial tests of newly-adopted BrightArrow mass notification system.
 - BrightArrow should allow better flexibility and reliability due to direct integration with PowerSchool data.
 - Also offers more robust communication tools for office staff and teachers.
- Evaluating Filewave licensing renewal to help optimize our use of available licenses while also managing licensing costs.
- Successfully completed audit and testing of servers housed on the network.
 - Improved implementation of backup structure and procedures for some of our core servers, such as Filewave MDM.
 - This should allow for more reliable and efficient backups in the event of a need for recovery.
 - Disabled external access to legacy SIS server from outside of TCSC's network, helping to increase security of archived data.
