Dr. Glaze,

]

Feel free to share this conceptual with the Board. This is called an "urban compact roundabout". INDOT contends that this type of RAB is safer for motorists and serves as a traffic calming measure for traffic entering the City and turning at the intersection.

The upside to sending letter of support is that any time an entity can show a 'partnership' with another agency, it is beneficial. INDOT has mentioned on numerous occasions that being sensitive to the school's needs is forefront in their minds.

INDOT does not need the letter of support to do the project. It would only bolster chances of receiving more financial aid as the project is scored. If the Board is opposed, that is ok.

INDOT has relayed to me that it wants to install sidewalks on the north side of Park Road to solve connectivity issues with those wanting to participate in school activities. Would also likely install a cross walk at the road entrance west of football field for those living along Park Road attending activities at the school. Thus, a sidewalk on north side of Park Road will be nice.

Also, please share with the Board that at the time of transition from a city street to a state highway (on or about September 30) the Park Road/19 intersection will go to a **4 WAY STOP**.

This should greatly help with buses getting turned onto Park Road and on to school.

Thank you for sharing this information.

Jane
