

Technology Board Update
September 8, 2026
Steven Gingerich

- Completed renewal and installation of Apple ADE Tokens, ensuring continued communication with Apple infrastructure for device management.
- Successfully onboarded Cloudflare's Enterprise-tier Email Security.
 - This was applied for through their CyberSafe Schools program; providing robust threat protection at *no cost* to the Corporation while maintaining full compliance with all student and data privacy standards.
 - Integrates with Gmail to scan incoming emails, links, and attachments in real time, featuring automated threat removal (including deleting malicious emails from inboxes post-delivery) to reduce the need for manual IT intervention.
 - Currently running transparently to end users in a monitoring phase with plans to evaluate moving to pre-delivery inline filtering in the future.
- Performed audit of Firewall rules to reduce avenues of ingress and egress traffic on firewall ports no longer in active use.
- Collaborating with GoDaddy to complete verification and renewal of SSL certificates used for TCSC domains.
 - IT will perform SSL installations once renewal is complete.
