

Technology Board Update

October 13, 2026

Steven Gingerich

- Completed installation of Filewave SSL certificates to ensure continued secure communication between managed devices and Filewave MDM servers.
- Met with Adtec regarding E-Rate funding and planning for future projects.
 - Investigating current infrastructure to identify critical areas in need of update/upgrade.
 - This includes battery backup systems and server cooling solutions; both of which are aged and have received several temporary repairs.
- Conducted critical maintenance updates on servers used to facilitate, encrypt, store, and transfer system backups.
- Trialing new systems for remote Windows support.
 - Testing migration from Remotely to ControlR; a more efficient, more frequently maintained alternative.
 - No cost is attached to utilization of either product as they are housed on TCSC's technology infrastructure.
